About WAND Foundation Taxonomies

WAND is the industry leader in developing and providing pre-built foundation taxonomies to companies around the world to improve organization, tagging, and search of unstructured and semi-structured information. There are more than 150 common enterprise applications that can use taxonomy covering categories like enterprise content, web content management, e-commerce catalogs, directories, spend and procurement, product lifecycle management, digital asset management, behavioral targeting, enterprise search, and more.

The WAND Taxonomies in this catalog are foundation taxonomies, meaning they are designed to provide a strong starting point which can then be customized for a specific business's needs. It's difficult to find a taxonomy that will be a perfect fit for your needs straight out of the box, so foundation taxonomies are a great place to start because they can provide an initial 80% starting point and jump-start. With foundation taxonomies, the time spent developing taxonomy is dramatically reduced. Foundation taxonomies provide a common sense starting point for all stakeholders in a taxonomy project so that targeted feedback can be provided to customize the taxonomy specifically for your needs. When companies start with a blank slate when embarking on a taxonomy project, the results are usually not very successful.

WAND has professional services and related tools to help customize these foundation taxonomies. Tools and services include taxonomy roadmap development, taxonomy customization, automatic tagging, business categorization, URL classification, spend analysis, query log analysis, product classification, taxonomy integration consulting, and more.

With over two decades of experience in developing and deploying taxonomies, WAND has the expertise to help make any taxonomy driven project a success.

WAND Product and Service Taxonomy

The WAND Product and Service Taxonomy has been developed over the course of 20 years and includes 43,000 categories covering all products and services. Organized into a multi-level hierarchy, the WAND Product and Service Taxonomy includes more than 42,000 synonyms, translations into 11 languages (Spanish, French, Italian, Portuguese, German, Swedish, Japanese, Traditional Chinese, Simplified Chinese, Korean, Vietnamese), and over a million additional keywords from electronic search environments. Unique attribute templates have been developed for each category making the WAND Product and Service Taxonomy ideal for cataloging and product classification.
